PROFESSIONAL SUMMARY

Final-year CS & Business Systems undergraduate with hands-on experience in Data Structure & Algorithms, Data Science, Generative AI and the basics of LLM APIs.

TECHNICAL SKILLS

Languages	C • Java • SQL
Analytics	Data Visualisation
Tools	GitHub • VS Code
Database	MongoDB • MySQL
Soft Skills	Analytical Thinking • Critical Thinking • Communication • Problem Solving
AI	Generative AI Basics • LLM APIs

PROJECTS & EXPERIENCE

Cloud-Based Generative AI Healthcare Decision Support System

- Architecting a cloud-native application leveraging Generative AI to assist clinicians in medical decision-making.
- Designing AI pipelines to process and analyze patient data, generating actionable clinical insights at scale.
- Applying software engineering best practices: modular design, API integration, and scalable data architecture.

Lane Detection using OpenCV

- Developed a real-time lane detection system using Python and OpenCV to identify road lane boundaries from video frames.
- Applied image preprocessing techniques such as grayscale conversion, Gaussian blur, and Canny edge detection to extract relevant road features.

E-Governance Platform

- Designed and prototyped a citizen-facing e-governance solution; recognized at college-level hackathon.
- Collaborated cross-functionally to define system architecture, user workflows, and data models.

EDUCATION

College, Delhi

B.Tech – Computer Science | CGPA: 8.95

XYZ School

Class 12: 83% (2022)

YZX School

Class 10: 84.42% (2020)

CERTIFICATIONS

- Introduction to Data Visualization
- Data Science & AI Master
